

RAIL

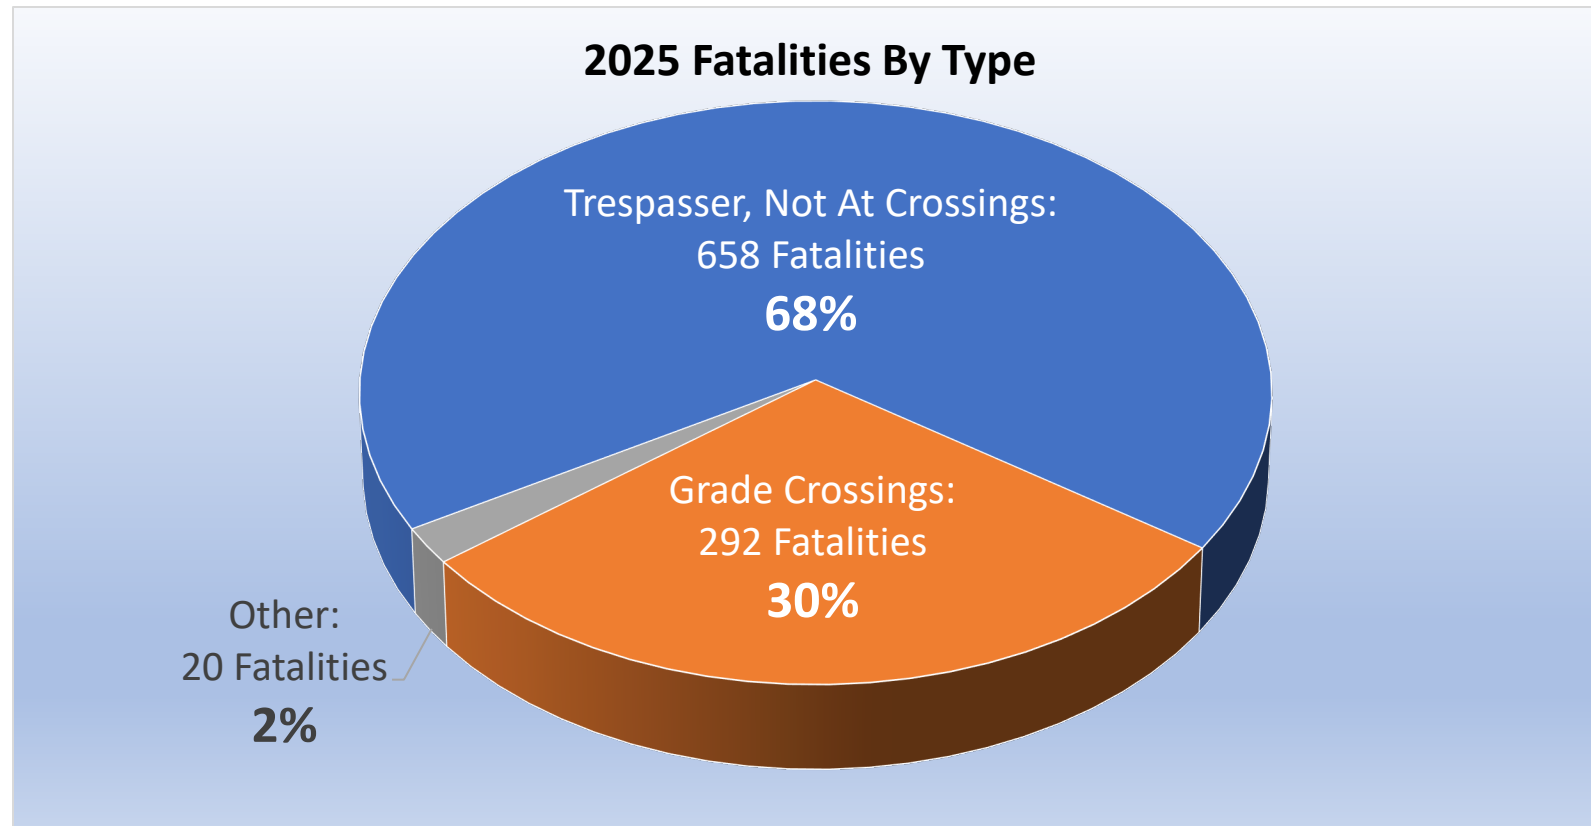

MOVING AMERICA FORWARD

Reducing Accidents and Fatalities at Crossings

Office of Railroad Safety,
Signal & Train Control, Grade Crossing Division

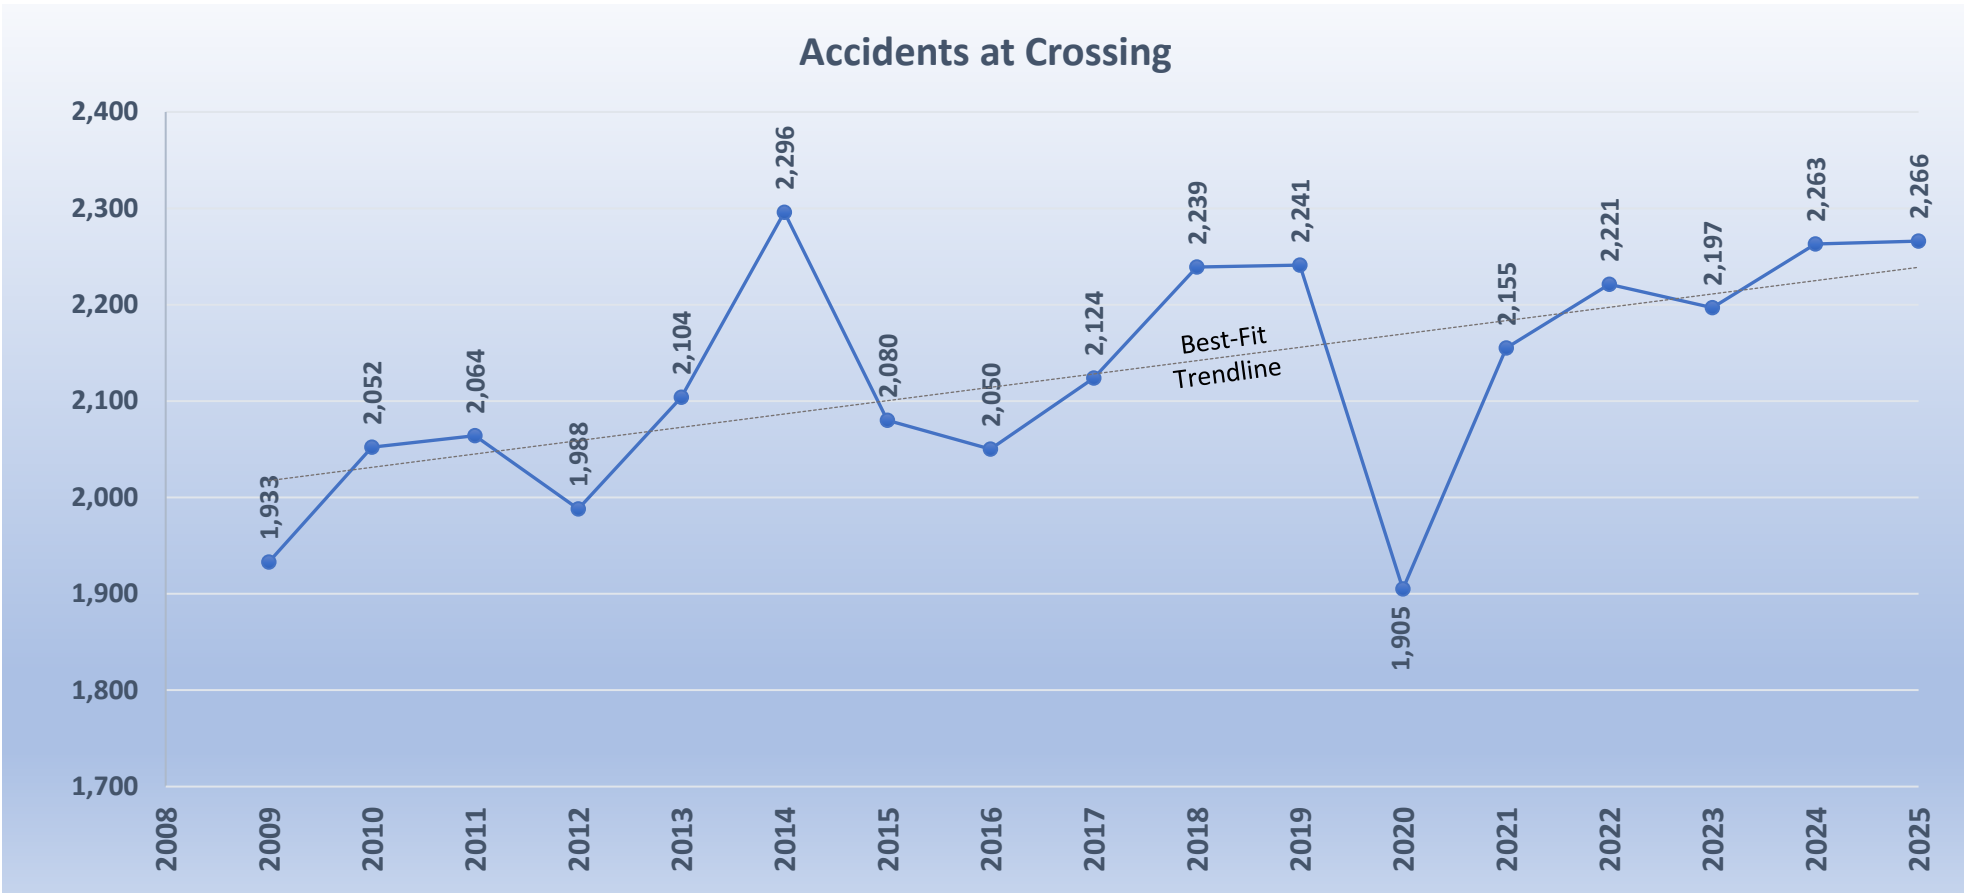

Crossing and Trespassing represent about 98% of all fatalities across the rail network in 2023

Crossing Accidents and Fatalities by Year

Accidents at crossings over time

2025 had the most accidents since 2014

Crossing Accidents and Fatalities by Year

Fatalities at crossings over time (excluding suicides)
2025 had the most fatalities since 2007

Objective

Objective:

- To notify and familiarize State DOTs about the high-risk crossing locations that are identified within their state.
- To provide engineering recommendations and solutions to mitigate crossing hazards at those crossings
- To provide education on funding opportunities available

Analyzing Data

A list is generated to identify approximately 100 crossings:

- Crossings with the 6 of more accidents over a 5-year period
- Crossings with 2 or more fatal accidents over a 5-year period
 - Note that injuries were not analyzed because the FRA goals focus on reducing accidents and fatalities only

Working one state at a time, we meet with the State DOT to inquire about these crossings in their state. We discuss which crossings may already have a programmed a project (or recently completed construction) to improve safety.

Analyzing Data

~~Scan this QR Code to see the current list:~~

Detailed Analysis of Accidents at Crossings

For those that are not yet programmed for safety improvements, we begin a more detailed analysis and preparations for a diagnostic site visit.

DEPARTMENT OF TRANSPORTATION		HIGHWAY RAIL CROSSING		CRASH REPORT	
FORM NO. 1022 (2015) REVISED 01/15		ACCIDENT/INCIDENT REPORT		CRASH REPORT No. 7123 888	
1. Name of Reporting Railroad CSX Transportation (CSX)	1a. Application Code CSX	3. Railroad Accident/Incident No. 80125596	2. Name of Other Railroad or Other Party Filing or Prepared to be Filed in This Accident/Report None	3a. Accident Code FNS	3b. Railroad Accident/Incident No. 80125596
4. Name of Railroad or Other Under Investigation for Track Maintenance CSX Transportation (CSX)	4a. Date of Accident/Incident 1/12/18	4b. Time of Accident/Incident 18:29	5. Date of Report/Report 1/12/18	6. Time of Report/Report 18:29	7. Date of Report/Report 1/12/18
7. Name of Public Route ROCKVILLE	7a. Suburban METROPOLITAN	7b. County MONTGOMERY	8. State MD	9. Mile 3.2	10. Date 1/12/18
11. City ROCKVILLE	11a. County MONTGOMERY	11b. Highway Name or No. RANDOLPH ROAD	11c. State MD	11d. Mile 3.2	11e. Date 1/12/18
12. Highway User Involved			13. Rail Equipment Involved		
12a. Type A. Auto B. Truck C. Motorcycle D. School Bus E. Other Motor Vehicle F. Pedestrian G. Bicyclist H. Other	12b. Code A B C D E F G H	12c. Description 1. Make 2. Year 3. Color 4. License 5. Diagnostic Site Visit

We travel to the crossings site(s) in that state and conduct a diagnostic site visit with all relevant stakeholders:

- FRA
 - HQ Staff
 - Local S&TC Specialist or Inspector
 - GX&TP Specialist or Inspector
- FHWA
- State DOT
- Public Utility Commission
- Local agencies such as city or county staff
- Railroads
- Police and Law Enforcement
- EMS / First responders
- Any other stakeholders with interest

Diagnostic Site Visit

FRA lets the state determine whether FRA or the state leads the diagnostic

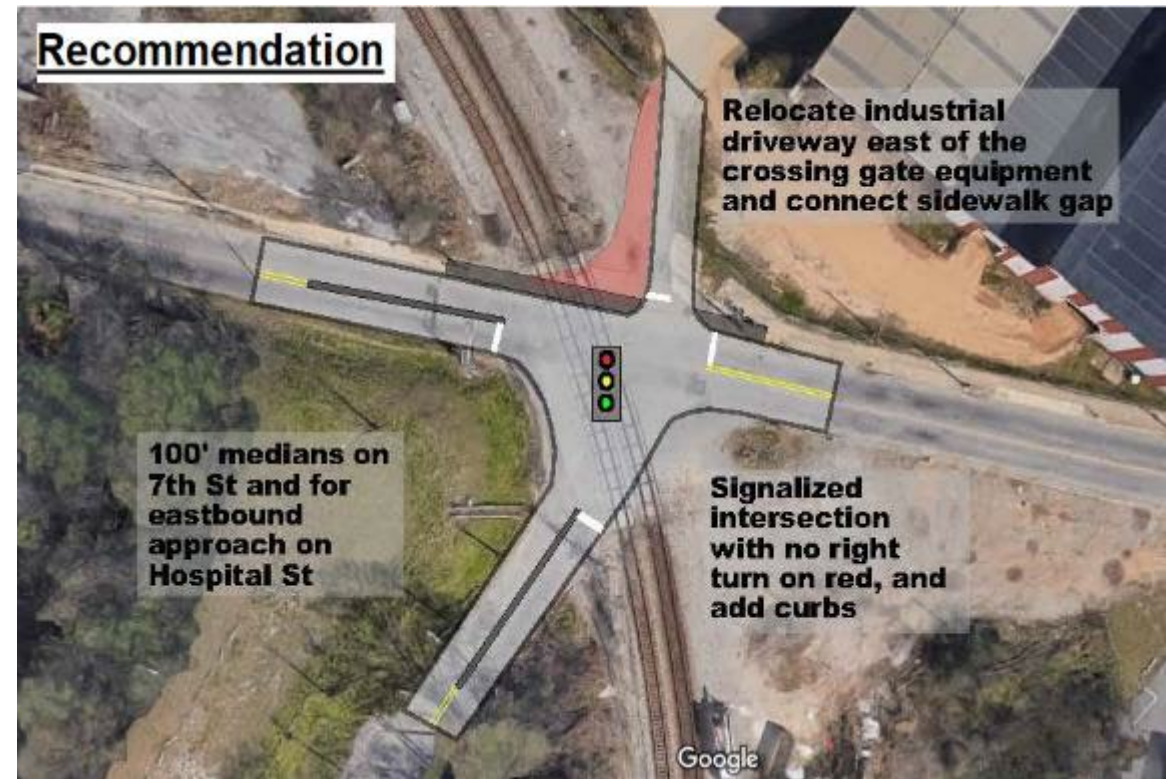

- If FRA is the lead manager of the diagnostic site visit, FRA will draft the report to document
- If the state takes the lead, then FRA will review the draft of the report that they generate and provide feedback.

Diagnostic Site Visit

The report describes the accident history, crossing characteristics, site conditions found in the field, roadway user actions observed, and recommended improvements as determined by the diagnostic team.

- Recommended improvements may be broken down in to short, medium, and longer-term depending on the circumstances
- Photos and diagrams of the existing conditions and potential locations for improvements are included in the reports

Project programming and funding

We have no direct funding to construct improvements, and the roadway owners have the final determination on whether to implement projects

- We direct states, municipalities, and railroads towards funding opportunities (i.e. CRISI, GCE, CARSI, RAISE)
- We also encourage states to consider Section 130 funding where appropriate and assist states in working with our FHWA partners on prioritization and programming issues that may arise

Without funding, improvements to a crossing are just pictures and recommendations

Pictures from Site Visits

Debris from prior crashes

Car Parts, Richmond VA

Gate Mechanism, Bartlett IL

Trespasser fatalities

Route 139 – Holbrook, MA MBTA

Fencing will be installed at each quadrant to channelize all pedestrians to deter trespassing along the R.O.W. or take short cuts to the station.

- Lower the flasher lights
- Zig Zag Fencing

Trespasser fatalities

Lincoln Street – Stockton, CA BNSF and Amtrak

Trespasser fatalities

Lincoln Street – Stockton, CA BNSF and Amtrak

Trespasser fatalities

Lincoln Street – Stockton, CA BNSF and Amtrak

Trespasser fatalities

Lincoln Street – Stockton, CA BNSF and Amtrak

Trespasser fatalities

Lincoln Street – Stockton, CA BNSF and Amtrak

Trespasser fatalities

Lincoln Street – Stockton, CA BNSF and Amtrak

Washington St, San Diego. Transit station adjacent to commuter and freight corridor, consider pedestrian issues not just vehicle issues.

Pedestrian safety issues – Ronkonkoma, NY

High Street, Oakland CA

Lack of pavement markings, channelization bollards damaged

Randolph Rd, Rockville MD

Traffic queue onto tracks from preemption issues (witnessed near collision)

Curtis Street, Chester VA

Vehicles turning on to tracks frequently. Solution was striping and bollards.

Before

After

Phoenix – Glendale AZ BNSF Corridor

Some crossings had over 20 accidents in a 5 year period

Bethany Home Road, Arizona

**Different overpass alignment appears to be a lower-risk crossing
but there are still lots of accidents.**

Bethany Home Road, Arizona

At red lights, vehicles would stop past the stop bar into the shadow of the bridge (Due to Phoenix heat and sun, drivers would seek the shade). Pre-signal to be installed ahead of bridge.

Villa Park, IL

Downstream signals need lenses so motorists don't have conflicting red and green signals
Pre-signal mounted on cantilever should have red lights in line vertically with flashing light

Challenges

What we have done so far:

- Have worked with multiple states: AZ, CA (x3), IL (x2), IN, MA, MD, NY, OH, PA, TX, UT, VA
- Upcoming work to include high risk locations in other states
- Visited over 70 crossing sites

How we can utilize inspectors and specialists:

- Leveraging the S&TC + GX inspectors and specialists can expand our “reach” to get to more states and crossings
- Value the inspectors and specialists feedback on all diagnostic reviews. You all are the boots on the ground that see issues that don’t always show up in data analysis

Lessons learned:

- Getting the right people on site

(Future) Data analysis and evaluation after construction

Evaluation of In future years an evaluation of the effectiveness may be conducted:

- An equal period of time is typically analyzed before and after construction
 - (such as a 5-year accident history before construction compared to a 5-year accident history after construction)
- Further analysis in future years may assist other agencies in determining the most cost-effective types of improvements
